GENERAL INFORMATION:
APPLICANT: SHAO, Wel et al
TITLE OF INVENTION: ISOLATED HUMAN AMINOACYLASE, NUCLEIC
TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN AMINOACYLASE, AND USES THEREOF
FILE REFERENCE: CL001179
CURRENT PELLING NUMBER: US/09/814,951A
CURRENT FILING DATE: 2001-03-23
NUMBER OF SEQ ID NOS: 14
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 3
LENGTH: 9704
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

Sequence 1.2 Application US/09851896
Patent No. 6410325
GENERAL INFORMATION:
APPLICANT: C. Frank Bennett
APPLICANT: Susan M. Freder
APPLICANT: Andrew T. Watt
TITLE OF INVENTION: EXPRESSION
FILLE OF INVENTION: EXPRESSION
FILLE OF INVENTION: EXPRESSION
CURRENT APPLICATION NUMBER: US/09/851,896
CURRENT FILING DATE: 2001-05-08
NUMBER OF SEQ ID NOS: 89
SEQ ID NO 3
LENGTH: 70000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DB 4; Length 1851;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Indels
Patent No. 6423827
GENERAL INFORMATION:
APPLICANT: Levitt, Pat R.
APPLICANT: Finenta, Aurea
APPLICANT: Fischer, Itzhak
APPLICANT: Tischer, Itzhak
APPLICANT: Tischer, Itzhak
APPLICANT: Tibuseva, Victoria
TITLE OF INVENTION: Limbic System-Associated Membrane
TITLE OF INVENTION: Protein and DNA
NUMBER OF SEQUENCES: 29
CORRESPONDENCE ADDRESS:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 3,

                                          Sequence 1, Application US/09345882

Patent No. 6399373

GENERAL INFORMATION:
A NUCLEIC ACID ENCODING A RETINOBLASTOMA BINDING PROTEIN (RBP-7)
TITLE OF INVENTION: A NUCLEIC ACID ENCODING A RETINOBLASTOMA BINDING PROTEIN (RBP-7)
TITLE OF INVENTION: A NUCLEIC ACID ENCODING A RETINOBLASTOMA BINDING PROTEIN (RBP-7)
TITLE OF INVENTION: AND POLYMORPHIC MARKERS ASSOCIATED WITH SAID NUCLEIC ACID.

SEQUENCE CHARACTERISTICS:
LENGTH: 10684 base pairs
TYPE: nucleic acid
STRANDEDNESS: single
TOPOLOGY: linear
MOLECULE TYPE: DNA (genomic)
DESCRIPTION: Sequence between exon 1 and exon;
Patent No. 6068976

URC-07-914-281-5/C

15 Sequence 5, Application US/07914281

15 Patent No. 5324663

16 GENERAL INFORMATION:
17 TILE OF INVENTION: METHODS AND PRODUCTS FOR THE SYNTHESIS

TITLE OF INVENTION: GLYCOLIPIDS, OR AS FREE MOLECULES, AND FOR THE ISOLATION

TITLE OF INVENTION: OF CLONED GENETIC SEQUENCES THAT DETERMINE THESE STRUCTU

NUMBER OF SEQUENCES: 14

CORRESPONDENCE ADDRESS:
ADDRESSEE: OBLON, SPIVAK, MCCLELLAND, MAIER & NEUSTADT,
ADDRESSEE: POLC.
STREET: 1755 Jefferson Davis Highway, Fourth Floor
                                                             6420
                                                                                                                                                                                                                    6360
                                                                                                                                                                                                                                                                  6300

Patent No. 5981174

GENERAL INFORMATION:
APPLICANT: Wolf, Charles R.
APPLICANT: Spurr, Nigel K.
APPLICANT: Spurr, Nigel K.
APPLICANT: Gough, Alan C.
TITLE OF INVENTION: GENETIC ASSAY
NUMBER OF SEQUENCES: 25
CORRESPONDENCE ADDRESS:
ADDRESSEE: ADDRESSE:
STREET: 2101 L Street N.W.
                   MEDIUM TYPE: Floppy disk
COMPUTER: IMP PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/145,658D
FILING DATE: 04-NOV-1993
CLASSIFICATION T435
PRIOR APPLICATION DATA:
APPLICATION NUMBER: GB 9001181.8
FILING DATE: 18-JAN-1990
PRIOR APPLICATION DATA:
APPLICATION NUMBER: US 07/732,223
FILING DATE: 18-JAN-1990
PRIOR APPLICATION NUMBER: US 07/732,223
FILING DATE: 18-JAN-1991
ATTORNEY/AGENT INFORMATION:
NAME: Brady, Jr., James W.
REFERENCE/COCKET NUMBER: E8280.017
TELEPHONE: 202-887-0869
INFORMATION FOR SEQ ID NO: 22:
SEQUENCE CHARACTERISTICS:
LENGTH: 1566 base pairs
TYPE: nucleic acid
STREE TOPOLOGY: 1 linear
MOLECULE TYPE: NON AD MRNA to MRNA
HVPOOTHETICAL: NO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 3. Application US/09754250
Patent No. 6376225
GENERAL INFORMATION:
APPLICANT: WEIN MING-HUI et al
TITLE OF INVENTION: ISOLATED HUMAN PHOSPHODIESTERASE
TITLE OF INVENTION: PROTEINS, NUCLEIC ACID MOLECULES ENCODING HUMAN
TITLE OF INVENTION: PHOSPHODIESTERASE PROTEINS, AND USES THEREOF
FILE REFERENCE: CL001063
CURRENT APPLICATION NUMBER: US/09/754,250
CURRENT FILING DATE: 2001-01-05
NUMBER OF SEC ID NOS: 5
SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
